

## IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. *(Previously Presented)* A digital broadcast receiver that receives digital broadcast data, comprising:

control means configured to reproduce the digital broadcast data based on contract information recorded on a memory card plugged into a card slot, wherein a memory for data storage is built into the memory card, and

an interface means, added to the control means, configured to obtain program selecting data contained in the received digital broadcast data and to record the program selecting data into the memory of the memory card plugged into the card slot.

2. *(Previously Presented)* The digital broadcast receiver according to claim 1, wherein the interface means obtains adjustment data for each unit in the digital broadcast receiver and records the adjustment data into the memory of the memory card plugged into the card slot.

3. *(Previously Presented)* The digital broadcast receiver according to claim 1, wherein the interface means obtains data broadcast received data contained in the received digital broadcast data and records the data broadcast received data into the memory of the memory card plugged into the card slot.

4. *(Cancelled).*

5. *(Previously Presented)* A digital broadcast receiver that receives digital broadcast data, comprising:

a control section configured to reproduce the digital broadcast data based on contract information recorded on a memory card plugged into a card slot, wherein a memory for data storage is built into the memory card, and

an interface section, added to the control section, configured to obtain program selecting data contained in the received digital broadcast data and to record the program selecting data into the memory of the memory card plugged into the card slot.

6. – 10.        *(Cancelled).*

11.        *(Previously Presented)* A digital broadcast receiver system that receives digital broadcast data, comprising:

control means having the capability of being remotely controlled and configured to reproduce the digital broadcast data based on contract information recorded on a memory card plugged into a card slot, wherein the memory card has a memory for data storage built in;

interface means configured to obtain program selecting data contained in the received digital broadcast data and to record the program selecting data into the memory in the memory card plugged into the card slot; and

a remote controller configured to remotely operate the control means, the remote controller being equipped with operating members, a display unit, and a card slot,

wherein when the memory card is plugged into the card slot, the remote controller reproduces the program selecting data recorded on the memory and displays the program selecting data on the display unit, and sends program select information to the digital broadcast receiver selected based on the contents displayed on the display unit.

12.        *(Previously Presented)* A digital broadcast receiver system that receives digital broadcast data, comprising:

control section having the capability of being remotely controlled and configured to reproduce the digital broadcast data based on contract information

recorded on a memory card plugged into a card slot, wherein the memory card has a memory for data storage built in,

an interface section configured to obtain program selecting data contained in the received digital broadcast data and to record the program selecting data into the memory of the memory card plugged into the card slot; and

a remote controller configured to remotely operate the control means, the remote controller being is equipped with operating members, a display unit, and a card slot,

wherein when the memory card is plugged into the card slot, the remote controller reproduces the program selecting data recorded on the memory and displays the program selecting data on the display unit, and sends program select information selected based on the contents displayed on the display unit to the digital broadcast receiver.

13. *(Previously Presented)* A method of controlling a digital broadcast receiver, adapted to be remotely controlled by means of a remote controller, so that received digital broadcast data is reproduced based on contract information recorded on a memory card plugged into a card slot, the method comprising:

obtaining program selecting data contained in the received digital broadcast data;

storing the program selecting data into a memory built into the memory card plugged into the card slot;

plugging the memory card with the stored program selecting data into a card slot provided in the remote controller;

reproducing the program selecting data stored on the memory card;

displaying the program selecting data on a display unit provided in the remote controller; and

transmitting program select information selected from the contents displayed on the display unit of the remote controller to the digital broadcast receiver based on an operation of the operating members of the remote controller.

14. – 15. (Cancelled)

16. (Previously Presented) A remote controller for remotely operating a digital broadcast receiver which receives digital broadcast data and performs reproduction processing on the digital broadcast data based on contract information recorded on a memory card the remote controller comprising:

operating members;

a display unit; and

a card slot configured to receive the memory card, the memory card having internal memory that stores program selecting data contained in the received digital broadcast data,

wherein when the memory card is plugged into card slot, the remote controller reproduces the program selecting data recorded in the memory card, displays the program selecting data on the display unit, and sends program select information to the digital broadcast receiver selected based on the contents displayed on the display unit.

17. (Previously Presented) A method of controlling a digital broadcast receiver via a remote controller so as to reproduce received digital broadcast data based on contract information recorded on a memory card plugged into a card slot, the method comprising:

reproducing program selecting data contained in the received digital broadcast data that is recorded on the memory card when the memory card is plugged into a card slot of the remote controller;

displaying the program selecting data on a display unit provided in the remote controller; and

transmitting program select information selected from the displayed contents on the display unit of the remote controller to the digital broadcast receiver based on an operation of operating members of the remote controller.

18. – 19. (Cancelled).

20. (*Previously Presented*) A remote controller which operates to reproduce received digital broadcast data based on contract information recorded on a memory card, comprising:

- a plurality of operating members;
- a display unit; and
- a card slot,

wherein, when the memory card having program selecting data contained in the received digital broadcast data written into its built-in memory is plugged into the card slot, the remote controller functions to reproduce the program selecting data recorded on the memory of the memory card, displays the program selecting data on the display unit, and transmits program select information selected from the displayed contents on the display unit to the digital broadcast receiver-based on an operation of the operating members.
